PyCharm Installation Guide (MacOS)

Installing PyCharm

1. Download PyCharm from the JetBrains website. Here is the link: https://www.jetbrains.com/pycharm/download
2. Click on **Download** under the Professional or Community versions.
   Tip: Select .dmg (Intel) if your machine runs on an Intel chip and .dmg (Apple Silicon) if it runs on an M1 Chip.
3. Open the downloaded .dmg executable file.
4. Drag the PyCharm icon into the Applications folder in the pop-up interface.
5. Open PyCharm from the Applications folder and **Accept** the user agreement.
6. Select your preferred data sharing option from the next prompt.
7. If the Professional version was selected, **Activate PyCharm** with the code received from the course lecturer or opt for a trial version.

Note:
If all steps have been followed, PyCharm should run fine on your machine (or on cloud). If, however, troubleshooting and support is required, please contact that Data Science Helpdesk to resolve[1].
